Dear President Kouchi, Speaker Saiki, and Members of the Legislature:

For your information and consideration, I am transmitting a copy of the annual report on the "Six-Year Program and Financial Plan for School Repair and Maintenance," pursuant to Section 302A-1312, Hawaii Revised Statutes (HRS). In accordance with Section 93-16, HRS, I am also informing you that the report may be viewed electronically at: http://www.hawaiipublicschools.org/VisionForSuccess/SchoolDataAndReports/StateReports/Pages/Legislative-reports.aspx.

Sincerely,

Dr. Christina M. Kishimoto
Superintendent

Annual Report on Six-Year Program and Financial Plan for School Repair and Maintenance

December 2020

Section 302A-1312, Hawaii Revised Statutes, requires the Hawaii State Department of Education (Department) to annually report on the six-year program and financial plan for school repair and maintenance. The six-year program and financial plan for school repair and maintenance is located under the Department's Fiscal Biennium 2021-2023 budget request approved by the Board of Education on December 3, 2020. The plan can be found at the Board of Education's website at:
http://boe.hawaii.gov/Meetings/Notices/Meeting%20Material%20Library/FIC_12032020_Committee%20Action%20on%20recommendation%20concerning%20DOEs%20CIP%202021-23%20FB.pdf.

The Department is required to develop and maintain a facilities physical analysis report and a facilities financial analysis report for each public school. The report "School Facilities Capital Assessment" provides background, analysis on school repair and maintenance, an age profile, inventory analysis, and deferred repair for each public school.

DAVID Y. IGE

Chairperson, Finance and infrastructure Committee

FROM: Dr. Christina M. Kishimoto
Superintendent

SUBJECT: **Committee Action on Recommendation Concerning the Department of Education's Capital Improvement Projects Budget for 2021-2023 Fiscal Biennium**

I. EXECUTIVE SUMMARY

The Hawaii State Department of Education (Department) is proposing an $805,600,000 Capital Improvement Program (CIP) Biennium Budget for Fiscal Year (FY) 2021-2023 to cover the following eight areas of need:

Program Categories*	**FY2021-22**	**FY2022-23**
LUMP SUM – DEFERRED MAINTENANCE PROJECTS*	$168,000,000	$168,000,000
LUMP SUM – CAPACITY	$96,200,000	$85,400,000
LUMP SUM – INSTRUCTIONAL	$63,900,000	$7,850,000
LUMP SUM – SUPPORT	$47,300,000	$18,800,000
LUMP SUM – COMPLIANCE	$26,600,000	$17,550,000
LUMP SUM – HEALTH & SAFETY	$10,000,000	$10,000,000
LUMP SUM – PROJECT COMPLETION	$38,000,000	$38,000,000
LUMP SUM – BELLS & PAGING REPLACEMENTS**	$5,000,000	$5,000,000
TOTAL FY21-23 Biennium CIP Budget Request	**$455,000,000**	**$350,600,000**

**See Attachment D-1 for description of each "Lump Sum" category and Attachment D-2 for a detailed list of projects in the four categories of: Capacity, Instructional, Support, and Compliance. Health & Safety projects to be addressed as needs arise.*

***Bells and Paging System Replacements request comes from the Office of Information Technology Services but is included with the Department's CIP request due to the bond funding source.*

Recognizing the significant financial challenges facing the State, this overall funding request represents the highest priority needs distilled by the Department from a larger project list totaling $1,181,400,000 and is 12.1% less than the $916,728,000 of actual CIP appropriations for the past biennium. In fact, many projects included in this current budget request were included as part of the Department's previous CIP biennium budget request for FY 2019-2021 but were not funded.

II. HISTORY OF SUBJECT MATTER

During the July 18, 2019 General Business Meeting (GBM), the Board of Education (Board) adopted as one of the Finance and Infrastructure Committee (FIC) strategic priorities for the 2019-2020 school year to "establish the policies and structures necessary to direct and enable the Department to complete all facilities projects at its schools with the greatest socioeconomic and academic needs as determined by a priority order intended to advance equity" (FIC Strategic Priority 2).[1]

At its August 15, 2019 meeting, FIC approved a work plan and timeline to ensure Board policies and structures enable the Department to complete all facilities projects at our schools with the greatest socioeconomic and academic needs as determined by an equity priority order (FIC Strategic Priority 2) under Board Policy 301-10, Equitable Allocation of Facilities Resources. As part of its work plan, FIC recommended for Board approval (1) a policy related to equitable school facilities that would, at a minimum, sufficiently direct the Department to complete Deferred Maintenance Projects (DMPs) at our schools by order of greatest socioeconomic and academic needs and (2) a comprehensive, cohesive, and effective DMP priority list that is sufficiently based on equity.[2] This equity objective is accomplished by incorporating Title I and Comprehensive Support and Improvement (CSI) into a weighted score rubric.

During the September 19, 2019 FIC meeting, the Department presented a draft Board policy entitled "Equitable School Facilities." Due to concerns regarding equity, FIC elected to defer action on the draft Board policy.

During the October 3, 2019 FIC meeting, Committee Chairperson Kenneth Uemura tasked Committee Vice Chairperson Bruce Voss to revise the draft equitable school facilities policy and tasked the Department to draft priority criteria for executing CIP projects. The draft policy and draft priority criteria would be presented to FIC at its November 21, 2019 meeting.

---

[1]http://boe.hawaii.gov/Meetings/Notices/Meeting%20Material%20Library/GBM_20190718_Action%20on%20standing%20committee%20strategic%20priorities%20for%20SY%202019-2020.pdf

[2]https://alala1.k12.hi.us/STATE/BOE/Minutes.nsf/7d59b00aff8d3cf50a2565cb00663e82/8b834d24799fe30b0a25847400716305?OpenDocument

During the November 21, 2019 FIC meeting, the committee unanimously voted to adopt Committee Vice Chairperson Voss's proposed policy, which is now Board Policy 301-10, Equitable Allocation of Facilities Resources. FIC deferred action on the Department's priority criteria for executing CIP projects to its January 16, 2020 meeting to allow the Department to fully incorporate the new policy as described in Committee Vice Chairperson Voss's memorandum dated November 21, 2019.

During the November 21, 2019 GBM, the Board unanimously voted to adopt Committee Vice Chairperson Voss's proposed policy language, which is now Board Policy 301-10, Equitable Allocation of Facilities Resources.

At its February 20, 2020 meeting, FIC deferred action on the Department's priority criteria for executing CIP projects to the Committee's April 16, 2020 meeting to provide the Department with additional time to ensure that (1) all of the questions posed by committee members at previous meetings are answered; (2) the proposals fulfill the intent of the Board policy on Equitable Allocation of Facilities Resources; and (3) the proposals fulfill the Board's expectations, as described in Committee Vice Chairperson Voss's November 21, 2019 memorandum.

The April 16, 2020 FIC meeting was cancelled due to the COVID-19 related state closure and a refocusing of Department efforts on the global health pandemic.

At its November 19, 2020 meeting, FIC deferred action on the Department's priority criteria for executing CIP projects to the Committee's December 3, 2020 meeting to provide time for the Department to make revisions based on the discussion and recommendations made during the meeting. (Committee minutes pending.)

III. PURPOSE OF REPORT

Every two years the Department submits a proposed CIP biennium budget request to the Governor of the State of Hawaii for consideration. The Governor reviews the request in developing the Executive Branch biennium budget which is then submitted to the Hawaii State Legislature for the following odd numbered year legislative session.

Board approval is recommended for the Department's proposed CIP biennium budget request for FY 2021-2023 and six-year program.

IV. LIST OF KEY ISSUES

To assist in identifying the highest priority needs, a new scoring metric was applied. The prioritization criteria was developed by the Office of Facilities and Operations (OFO) Planning Section over the last nine months based on a previous CIP matrix, earlier iterations of prioritization criteria, and the need for a weighted system to

balance the needs of existing buildings with program priorities, goals, and directives per the Board and Department. These CIP Prioritization Criteria were used to rank over 100 projects, totaling $1,181,400,000 in needs, and to narrow down the highest ranking projects for inclusion in the biennium budget by taking into consideration:

- Health/Safety
- Condition
- Compliance
- Building Capacity
- Instructional Impact
- Title I
- CSI
- Shared Use
- Other Factors/Considerations

By using a weighted scoring metric, both socioeconomic and academic needs were considered along with other relevant factors into the establishment of the proposed CIP priority list. Socioeconomic needs are identified using a current list of schools eligible for support under Title I, Part A (Title I) of the Elementary and Secondary Education Act of 1965, as amended by the Every Student Succeeds Act (ESSA). Title I is the federal education program that provides financial assistance to local educational agencies and schools with high numbers or high percentages of children from low-income families to help ensure that all children meet state academic standards.

Academic needs are identified using a current list of schools identified for CSI under the Department's consolidated State Plan for ESSA. The CSI schools are schools with performance challenges that warrant the extensive support from federal and state resources for improvement. The Department identifies schools for CSI once every three years.

Based on the CIP budget amount requested, all projects scoring 94 or higher would tentatively be funded during the biennium. This cutoff of 94 will result in some identified projects remaining on the project wait list. The requested CIP budget will allow the Department to address the most critical needs, such as:

- Increase student capacity in the Campbell/Kapolei Complex Area and additional classrooms at Holualoa Elementary School in the Kealakehe Complex.
- Provide improvements at existing campuses for special education and support facilities;
- Continue to address compliance with federal Title IX gender equity and the Americans With Disabilities Act requirements; and

- Address immediate health and safety needs and support on-going CIP projects.
- Provide funding for Deferred Maintenance Projects (DMPs).

A more detailed list of projects included in each "Lump Sum" category (except for Health/Safety) can be found in Attachment D-2, with a list of DMPs included with a separate meeting item. CIP projects are distinguished from DMPs in that CIP projects represent new or additional space or major renovations of an existing structure whereas DMPs are largely major replacements or repairs of existing building components.

The Department's CIP budget is presented in six major program areas: Capacity, DMP, Instructional, Support, Compliance, and Health & Safety. See Attachment D-1 for descriptions of Lump Sum Categories.

In addition to these six program areas, the CIP biennium budget includes a lump sum request each year for Project Completion funds to cover supplemental consultant services, equipment costs for new facilities, and unanticipated cost expenses.

The final category in the CIP biennium budget, the eighth lump sum, is the Office of Information Technology Services' (OITS) request for bells and paging system replacements. These projects are a critical part of supporting school operations and OITS has identified 21 schools needing improvements in the next two years. This line item is considered a separate need and therefore was not included in the prioritization of CIP projects.

V. DISCUSS ANY FINANCIAL IMPACT EVIDENT IN SUBJECT MATTER

The construction industry is one of the few economic sectors to remain relatively steady during the pandemic and according to RLB's *COVID-19 Forecast Model for Overall Construction Cost Index, Escalation, and Trends for Honolulu*, the timing of bidding for these projects (before the lapse date of June 2024) will occur before an anticipated rise in escalation for the Honolulu construction sector, thereby making these projects a smart investment for the state.

Without approved funding for the deferred maintenance, the Department's existing facilities needs will continue to increase, the cost and frequency of operational repairs will increase, and students will miss out on opportunities for modernizations and new facilities.
The financial impact to the Department will be an increase in maintenance costs associated with new facilities. However, the benefit of the repair and maintenance projects at existing facilities will offset and/or reduce the cost and number of work orders submitted by schools and offices for existing facilities.

The budget request is formatted in eight Lump Sum categories in order to increase the efficiency of the Department in 1) requesting the release of funds and 2) implementing the projects. Another benefit of lump sum categories is the ability to make minor adjustments in the budget of each project within the lump sum. One project may not require its full amount, where another one might be underfunded and this flexibility can allow work to continue, rather than possibly wait an entire year for additional funds to become available in the next budget cycle.

VI. DESCRIBE ANY COMMUNITY OR PUBLIC ENGAGEMENT

The Facilities Development Branch developed this budget request based in part on prior input from the community during the 2018 stakeholder advisory group process for the Statewide Facilities Master Plan.

OFO has engaged with complex area superintendents who will communicate out to the principals for input on the weighted scoring rubric and list of DMP priority projects. Going forward, OFO will incorporate school input as a standard practice in conjunction with identifying and prioritizing CIP and DMP plans.

VII. RECOMMENDATION

The Department respectfully recommends that the Board approves the Department's proposed FY 2021-2023 Biennium CIP Budget in the amount of $805.6 million.

Various Schools, Statewide OITS Bells & Paging Replacements	$5,000	$5,000	$5,000	$5,000	$5,000	$5,000
CIP Budget Request Totals (sum of 8 Lump Sums):	**$455,000**	**$350,600**	**$555,000**	**$558,000**	**$568,000**	**$550,000**

2 Year Biennium Budget = $805.6 Million

DEFERRED MAINTENANCE PROJECTS
These projects include major replacements or repairs of major building components such as roof replacements, structural improvements, renovations that extend the life of the facility and other projects over the capitalization threshold, and therefore are eligible for bond funding. The periodic renewal of campus wide systems such as water lines, electrical infrastructure, and fire alarm systems are also included.

CAPACITY
These projects provide student seats to alleviate classroom crowding and excessive commute distances. New schools are based on population density changes and the anticipation of population growth from new housing subdivisions. Determination of new classroom buildings on existing campuses are based on projected population, campus capacity estimates, geographic exceptions, quantity and age of portables, master plans, overall school deficiencies, and capacity of nearby schools.

INSTRUCTIONAL
These projects provide modernizations, renovations and new facilities at existing campuses to support 21st century instructional needs. Additioally, Special Education, Career Technology Education and elective programs with unique facility needs including modernization and appropriate spaces at older schools are addressed.

SUPPORT
These projects address support areas on campuses. These include: administration facilities, libraries, food service and athletics. The facilities assessment identified projects that are beyond their useful life or are either significantly short of required areas, facilities, or other components of the Educational Specifications.

COMPLIANCE
These projects address compliance with the Americans with Disabilities Act or Title IX gender equity federal laws or regulations.

HEALTH & SAFETY
Heat abatement, safety and security vulnerability upgrades and traffic and pedestrian safety are acknowledged needs at schools across the state. The funds are for assessments and to address solutions on an on-going basis.

PROJECT COMPLETION
This lump sum is in addition to deferred maintenance projects, the four program areas and Health & Safety. The amount covers supplemental consultant services, equipment costs for new facilities and unanticipated costs.

OITS Bells & Paging Replacements
OITS has identified schools needing improvements to/replacements of their bell and paging systems in the next two years and future funding is anticipated for on-going system replacements.

Introduction & Methodology

Introduction and Methodology

In order to support the Hawaii Department of Education's (HIDOE or the Department) scholastic vision, each campus facility must be well-equipped with appropriate learning spaces for students and faculty alike. A capital improvement plan based on data-driven decisions will direct policy and investment to achieve the Department's vision and foster equity across HIDOE. With this objective, the Department has embarked on an assessment of every campus facility within its jurisdiction in order to develop this decision support document to inform future operational and capital decisions.

This document summarizes the results of the 2016 facility assessment for HIDOE that provides suggestions for future investment decisions. These components include a review of the entire building inventory of the facility portfolio, a space adequacy analysis, and an enrollment and capacity analysis. Data is combined to formulate a total Department-wide gap analysis for the next five years, which in turn can be used to help the Department with future legislative capital improvement projects budget requests.

FACILITY ASSESSMENT PROCESS

Figure 1 demonstrates individual components of facility assessment exercises leading to the production of gap analysis for decision support over the next five years.

Components of the HIDOE Facility Assessment

Each comprehensive assessment component is described in the following detail.

Building Inventory

Jacobs distilled HIDOE's repository of 50,000+ as-built documents into a comprehensive and organized electronic CAD platform reflecting the current state of all HIDOE facilities, and deployed highly-trained K-12 facility experts to visit all 261 school campuses to document physical characteristics and functional use of all campuses, buildings, and individual rooms.

Building Life Cycle Profile: The assessment team verified, updated, and in some cases drew from scratch, scaled drawings to document the layout, scale, construction type and age of 4,410 buildings for high level life-cycle analysis. HIDOE's intent is to measure facility condition using other existing deferred maintenance data sources as a supplement to Jacobs' findings.

Space Inventory Functional Use: Using innovative tablet technology, the assessors captured each room's functional use and square foot size for capacity and functional adequacy analysis.

Functional Adequacy

Using HIDOE's prevailing 2006 and 2008 Education Specifications as baseline standards, Jacobs compared existing facilities against space requirements to perform a gap analysis to reveal program deficiencies and develop relative measures of functional adequacy.

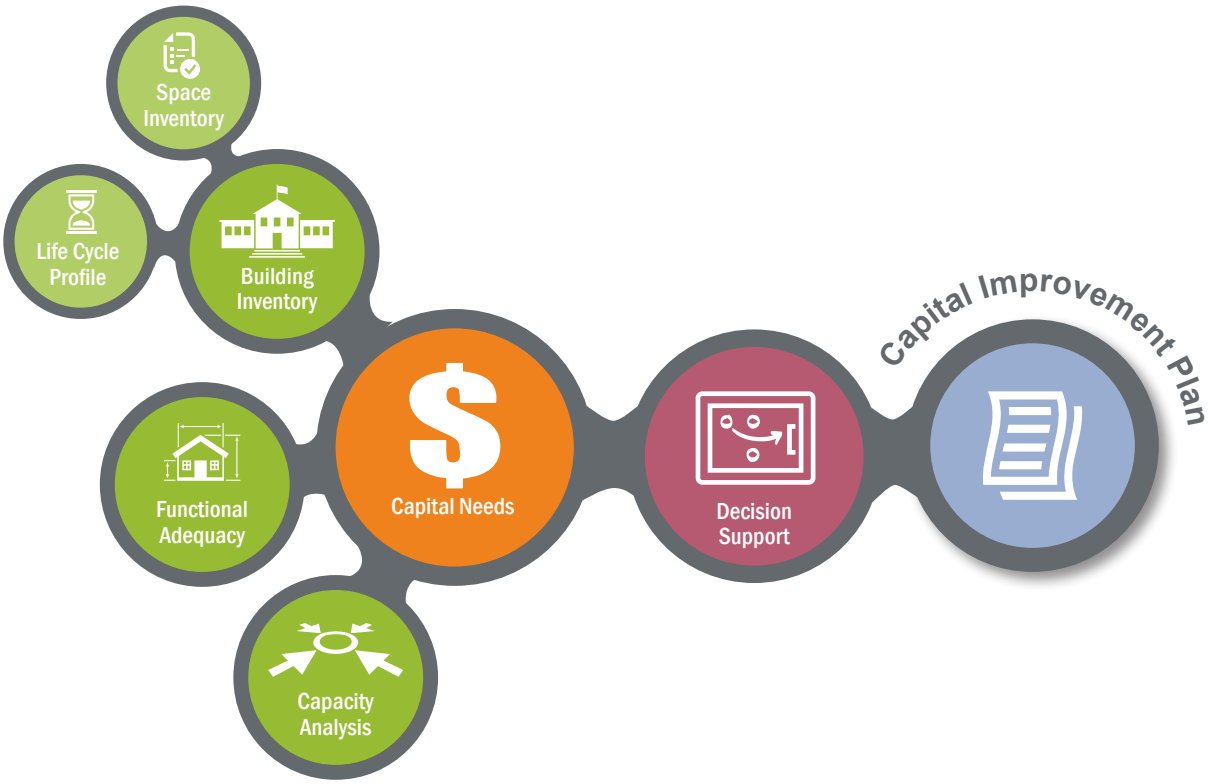

Figure 1: Hawaii DOE Comprehensive Assessment Process

In order to compare, rank, and prioritize HIDOE's facility needs, Jacobs developed a weighted rubric and 100-point adequacy scale in collaboration with HIDOE's leadership.

Enrollment and Capacity Utilization

The functional capacity of each school was determined by performing a thorough inventory of all educational spaces and applying consistent capacity formulas based on each school's educational program, grade level, master schedule, and room size constraints. Separate measures were calculated for permanent buildings, portables, and classrooms currently used for non-instructional purposes. By comparing the functional capacity to DOE-provided current and projected 2021-22 student enrollment for each school, Jacobs calculated capacity utilization percentages to measure how efficiently each campus is used.

Summary of Capital Needs

Based on the functional adequacy gap analysis, categorical program deficiencies were identified defining potential capital improvement options for consideration during future capital planning efforts. Capital needs identified include the expansion of capacity to relieve overutilization, construction/rehabilitation of specialty classrooms, such as science labs and career technology facilities, and expanded core facilities such as libraries, cafeterias, and administrative offices.

Decision Support Facilities Dashboard

In addition to this summary report, Jacobs is delivering the assessment findings in the form of a customized facility database and an interactive online data visualization platform for communicating facility needs to HIDOE stakeholders and decision makers.

HIDOE Facilities Capital Assessment findings are provided in an interactive online data visualization platform available through Tableau Public, as shown in Figure 2.

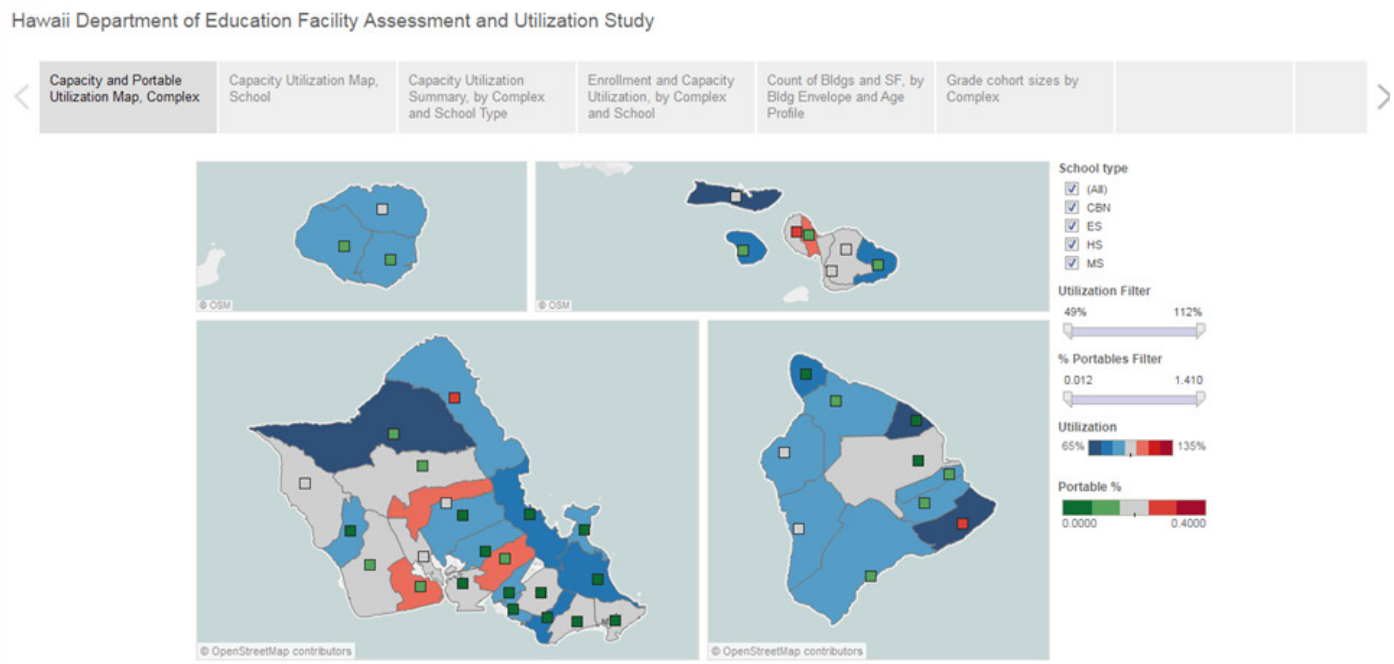

Figure 2: Tableau Display

Building Inventory

Building Inventory

HIDOE currently manages more than 20 million square feet of permanent educational and administrative facilities in 4,425 individual buildings on 261 school campuses, including conversion charter schools, with an approximate replacement value of over $7 billion. Table 1 summarizes the statewide building inventory by school type, Table 2 by district.

Table 1: HIDOE Building Inventory by School Type

Schools	Building Inventory								Building Age			
School type	Number of Schools	Number of Permanent Buildings	SF Permanent Buildings	Number of Portable Buildings	SF Portable Buildings	TOTAL Number of Bldgs	TOTAL SF	Portable SF % of Total	Oldest Bldg	Newest Bldg	Average Year Weighted by SF	% in 'Old' or 'Beyond Expected Life' Age Profile

53 Buildings over 100 years of Age

BENCHMARKING

Below, the average **student enrollment**, **school size**, and **sf/student** for the three major school grade levels of Hawaii schools are benchmarked against national averages as published in recent updates of the *Annual School Construction Report* by *School Planning & Management* magazine.

Table 3: DOE Avg Enrollment, SF, and SF/Student

Grade Level	Average Enrollment			Average School SF			Average SF / Student		
	HI	US	% of Nat'l Avg	HI	US	% of Nat'l Avg	HI	US	% of Nat'l Avg
Elementary School	514	520	99%	52,962	77,792	68%	103.0	149.6	69%
Middle School	774	705	110%	97,310	122,177	80%	125.8	173.3	73%
High School	1,362	992	137%	193,088	172,806	112%	141.7	174.2	81%

In general, Hawaii's student enrollments are on par or higher than national averages, and the gross SF and SF/student tend to be lower than average, except in the case of high schools. This is attributable to the absence of auditoriums and elementary/middle gymnasiums in HIDOE design standards, as well as the high degree of exterior circulation space in typical Hawaiian school design.

BUILDING LIFE CYCLE PROFILE

Working in collaboration with HIDOE staff, Jacobs performed a high-level study classifying each building by its relative age based on its structural/exterior envelope type construction. By dividing the normalized expected life for each construction type into thirds, each building was categorized as either 'New' (first third), 'Average' (second third), 'Old' (last third), or 'Beyond Expected Life'. These building life cycle profiles are outlined below:

Table 4: Building Life Cycle Profile

Building Envelope	New	Average	Old	Beyond Life Expectancy
CMU	0-25	25-50	50-75	>75
Concrete Panel	0-25	25-50	50-75	>75
Brick	0-25	25-50	50-75	>75
Metal Panel	0-25	25-50	50-75	>75
Stone	0-25	25-50	50-75	>75
Hybrid	0-25	25-50	50-75	>75
Wood Siding	0-17	17-34	34-50	>50
Stucco	0-17	17-34	34-50	>50

This approach yields a high-level summary assessment of each building's age, from which preliminary inferences may be drawn regarding overall general state for planning purposes, and requires additional information to determine more accurate measures of facility condition, such as HIDOE's facility maintenance and capital backlog schedules.

The number and SF area of HIDOE facilities falling into each age profile is outlined by construction type in the chart below:

Table 5: HIDOE Building Inventory by Construction Type

	New	Average	Old	Beyond Expected Life
CMU	322 2,957,849	618 4,435,653	702 4,488,338	45 459,813
Hybrid	36 384,548	184 1,756,081	193 1,427,295	8 68,243
Wood Siding	299 266,809	814 696,575	373 378,114	527 1,041,073
Pre Cast Concrete Panel	44 461,642	60 534,368	44 389,949	12 282,679
Brick		14 170,518	40 261,747	2 5,595
Stucco	10 120,177	3 32,517	2 1,574	1 4,196
Metal Panel	30 43,370	12 9,948	15 17,780	
TOTAL	741 4,234,395	1,705 7,635,660	1,369 6,964,797	595 1,861,599

Functional Adequacy

Functional Adequacy Assessment

A fundamental aspect of the Hawaii DOE statewide facility assessment is a **functional adequacy assessment**. Functional adequacy is a *systematic measure of each school facility's ability to adequately support the DOE's instructional mission*, based on each school's facility program as compared to standards.

The functional adequacy assessment is an essential tool in many institutions' attempts to maintain and modernize their facility portfolio and adapt aging facilities for new instructional techniques. The functional adequacy assessment findings provide consistent, equitable data to inform facility use and capital funding decisions, and suggest potential actions to not just repair building systems, but also adapt school facilities to better equip teachers and students for positive outcomes.

When performed in concert with a facility condition assessment, functional adequacy deficiencies typically imply capital costs over one-third of the overall funding requirement, as experienced with several comparable K-12 assessments performed by Jacobs over the last ten years.

FUNCTIONAL ADEQUACY CATEGORIES

Jacobs performed a facility program gap analysis comparing existing room counts, square foot areas, and physical adjacencies to the HIDOE Ed Spec standards to yield measured degrees of functional adequacy. The gap analysis identifies deficient conditions in cases where a school does not have the required number or sizes of instructional and support spaces, and calculates the relative degree of compliance to the standards along eight general facility categories:

1. **General and Special Education Classrooms**
2. **Specialized Classrooms**
3. **Age of Classroom Buildings**
4. **Portables**
5. **Administrative Center**
6. **Library and Computer Center**
7. **Food Service**
8. **Physical Education / Athletics**

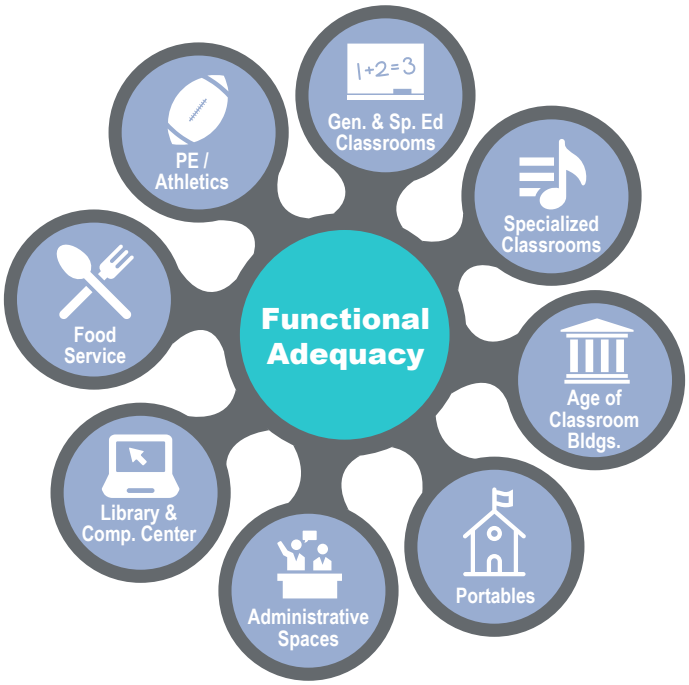

Figure 3: Categories to Calculate Functional Adequacy

METHODOLOGY

The DOE functional adequacy assessment adhered to a standards-based approach with a foundation in statewide consistency and objectivity. Facility data was collected in the field and compared to the department-wide standards. Whenever gap analysis reveals a deficient condition, a potential correction is noted, and adequacy scores are adjusted accordingly based on a weighted scoring rubric described below.

The facility standards and requirements used for this study are based on the current DOE standards for new facility design and construction by the DOE Facilities Planning Section, including:

- Elementary School Education Specifications, dated 2008
- Middle and Intermediate School Education Specifications, dated 2006
- High School Education Specifications, dated 2006

Among other requirements, these Education Specifications (Ed Specs) prescribe the *architectural program*, or quantity and sizes of spaces that a school are required to have based on the relative number of students or *design enrollment* that the school is designed to serve. These space requirements are driven by a complex parametric model called the Facilities Assessment and Development Schedule (FADS), that takes into account the specific grade level, expected student population, core curriculum, and the specific educational program of the school. The DOE's Facility Planning Section translated the Ed Specs/FADS into a scalable mathematical model by outlining the specific spaces requirements for all school types in tiered brackets of 100-student increments, as depicted in Figure 4. See Appendix C for complete educational specification requirements by school type and enrollment.

Middle School Enrollment Range	400-500			500-600		
Space Description	# of	Size	Total	# of	Size	Total

Figure 4: Educational Specification Requirements by School Type and Enrollment

The HIDOE also provided school by school **5-year demographic enrollment projections for the 2021-22 academic year** which along with the grade configuration served as the basis of determining which enrollment bracket pertains to each school. Using trusted 5-year projections for capital planning is an industry best-practice as 5-years is an approximate timeline for public institutions to develop a capital plan, secure funding, and implement design and construction of major capital projects. Jacobs compiled these data sources into a custom facility database tailored to DOE's standards to cross compare the space requirements with the projected enrollment of each school to define consistent standards-based space requirements.

Jacobs also compiled and field-verified a comprehensive database of campuses, buildings, and all individual rooms using an innovative methodology of annotating scaled drawings on electronic tablets capturing the SF areas and functional use of every space, and compiling all findings into a web-based central database.

Please note that along with this static snapshot report, Jacobs is also provided DOE the facility database, and this report is readily reconfigured to report on any enrollment year or updated to future standards or enrollment projections with minimal effort, and without the need to revisit facilities.

WEIGHTED SCORING RUBRIC

Calculations for the functional adequacy categories are based on objective field-verified facilities data, consistent application of HIDOE Ed Specs standards, and a **weighted scoring rubric**. While all aspects of a school facility are significant and preferences may vary among stakeholders, the functional adequacy rubric's relative weights were developed in good faith by HIDOE and Jacobs to emphasize those facility needs that have the highest degree of contribution to student achievement.

The following tables outline the breakdown of functional adequacy categories, relative weights, and contributing calculations for high schools, middle schools, and elementary schools. Note: Certain spaces are applicable only to some of the grade levels (i.e., gymnasia are only applicable to high schools). For this study, supplemental classrooms are only applicable to elementary schools as the elementary Ed Spec does not include specific requirements for music and science, and the field assessment did not differentiate general classrooms by subject at secondary schools. With exceptions noted in the pages that follow, this assessment did not include classroom furniture and equipment, instructional technology, school security, or other aspects of learning environment.

FINDINGS: OVERALL FUNCTIONAL ADEQUACY

By applying the methodology and scoring framework described above, Jacobs calculated a composite functional adequacy score of each school on a 100-point index scale representing a relative measure of its overall functional adequacy, as well as the contributing categorical scores for all weighted factors. The following pages outline a description of the scoring calculations and summary of findings, listing the outlier schools with the 25 lowest functional adequacy scores (representing the schools with the highest measured degree of need), as well as the schools with the highest five scores as a point of comparison. The complete findings for all schools are found in Appendix A.

This information identifies the types of facility needs at each school and benchmarks any school's needs among its peers. These findings, along with other fundamental factors such as capacity utilization, facility condition, operational and capital costs, and stakeholder input offer HIDOE a data-driven mechanism to prioritize informed operational and capital decisions.

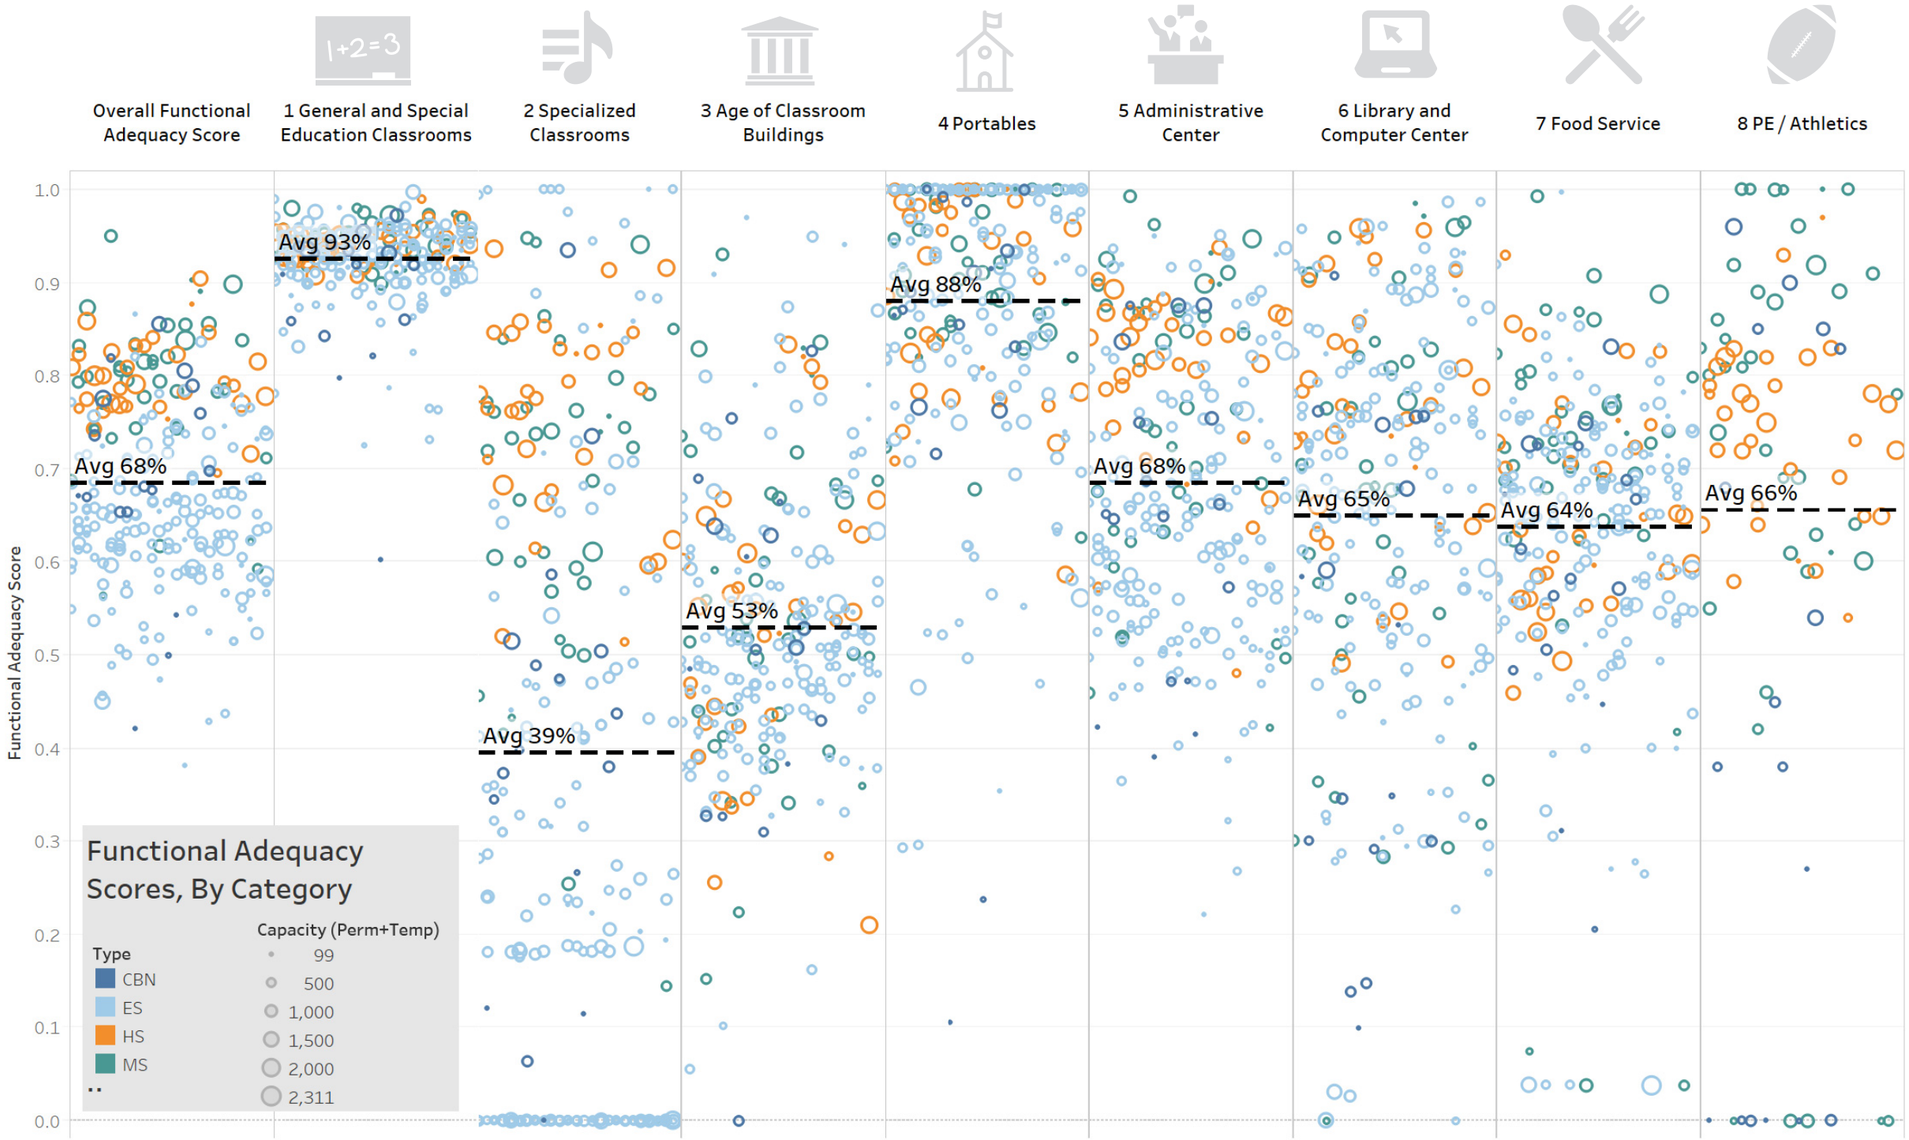

Figure 5: HIDOE Overall Functional Adequacy Results

This page is intentionally left blank.

FUNCTIONAL DEFICIENCIES

Armed with functional adequacy described above, HIDOE is able to use consistent data parameters to generate an equitable account of potential capital needs for future planning initiatives, and to justify data-driven funding decisions. Figure 6 and Table 9 describe the most frequently occurring deficiencies and school specific examples of capital needs.

Note that Kaewai Elementary is operating over-capacity and has a shortage of administrative space. Considering that Kaewai also has significant recapturable capacity, there is potential to solve its capacity problem by providing a right-sized administrative center, and recapturing the classrooms used for non-instructional uses.

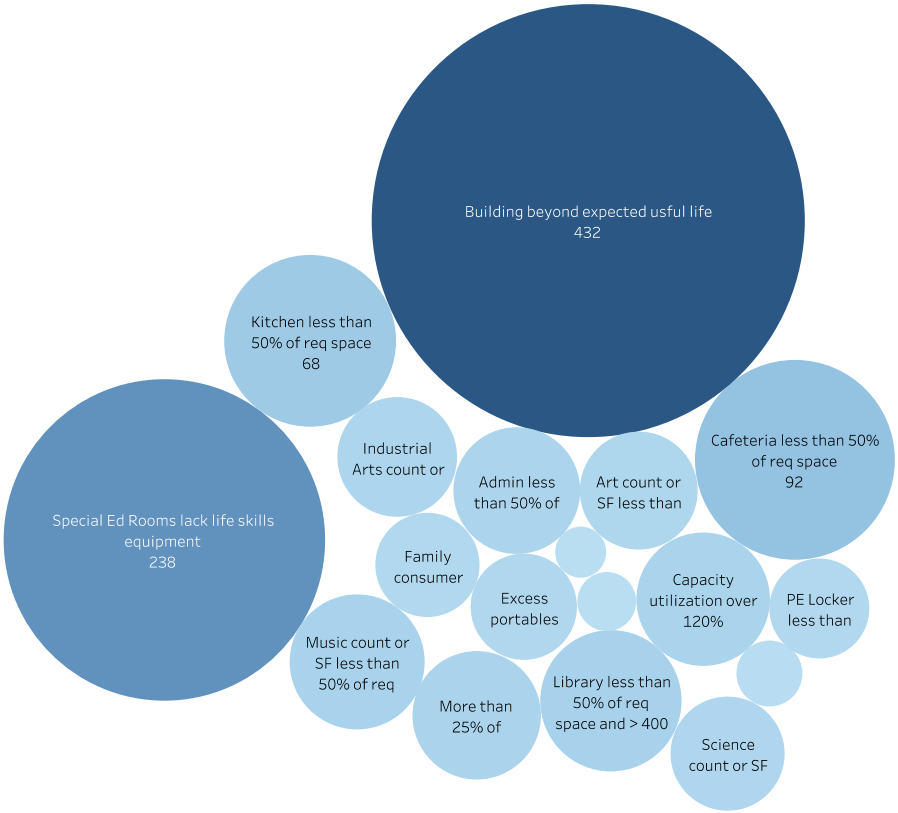

Figure 6: Frequently-Occurring Functional Deficiencies

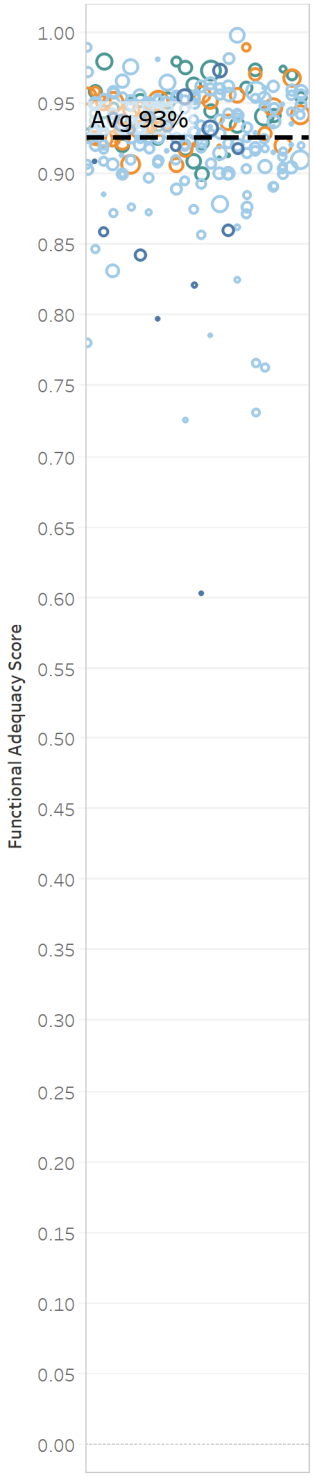
Table 9: School-Specific Functional Deficiency Examples

Ref	School Name	Capital need	Description
113	Kaewai El	**Admin less than 70% of req space**	373 enr, (1,855/4,640 = 0.40)
113	Kaewai El	**Cafeteria less than 70% of req space**	(5,004/7,610 = 0.66)
113	Kaewai El	**Capacity utilization over 115%**	373 projected enrollment, 322 capacity, 1.16 utilization
153	Wilson El	**Admin less than 70% of req space**	624 enr, (3,726/4,047 = 0.92)
153	Wilson El	**Admin less than 70% of req space and > 600 projected enrollment**	624, (3,726/4,047 = 0.92)
153	Wilson El	**Cafeteria less than 70% of req space**	(3,854/9,510 = 0.41)
153	Wilson El	**Capacity utilization over 115%**	624 projected enrollment, 498 capacity, 1.25 utilization
153	Wilson El	**Library less than 70% of req space and > 600 projected enrollment**	624, (2,544/6,220 = 0.41)
365	Kalanianaole El & Int	**Admin center age beyond useful life**	1921 Permanent Wood Siding
365	Kalanianaole El & Int	**Art count or SF less than 70% of req**	286 enr, (2/1 = 2.00) (1,059/2,050 = 0.52)
365	Kalanianaole El & Int	**Cafeteria less than 70% of req space**	(4,848/8,600 = 0.56)
365	Kalanianaole El & Int	**Library center age beyond useful life**	1921 Permanent Wood Siding
365	Kalanianaole El & Int	**Locker less than 70% of req space**	(/7,740 = 0.00)
365	Kalanianaole El & Int	**Music count or SF less than 70% of req**	286 enr, (0/1 = 0.00) (0/3,795 = 0.00)
365	Kalanianaole El & Int	**Science count or SF less than 70% of req**	286 enr, (1/1 = 1.00) (1,299/2,260 = 0.57)

CATEGORY 1: GENERAL AND SPECIAL EDUCATION CLASSROOMS



Fundamental to the functional adequacy of a school facility is the existence of sufficient classrooms to reasonably accommodate the current and near term enrollment and support basic curriculum delivery and school operations. The classroom adequacy score is a reflection of capacity utilization (described in detail in the next section), except these measures **are capped at 100 percent,** as the HIDOE does not wish to skew overall blended adequacy scores in cases where schools have surplus classrooms due to low enrollment versus capacity. Scores below 80 percent are symptomatic of capacity over utilization.

The specific measurements which compose the general and special education classroom category score are:

- **General Classrooms** – Score is based on two weighted measures: count and square feet area of existing general classrooms expressed as percentages of the count and square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment. Note space requirement for general classrooms includes the HIDOE Ed Spec's required **supplemental classrooms** at high schools and middle schools, as they are indistinguishable from general classrooms during the assessment. Conversely, elementary school supplementary classrooms are measured under the separate heading for specialized classrooms below.
- **Special Education Classrooms** – Score is based on three weighted measures:
    - 1) and 2) Count and square feet area of existing special education rooms expressed as percentages of the count and square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment. Scores are drawn in aggregate for fully self-contained classrooms, resource services classrooms, and pre-kindergarten special education classrooms.
    - 3) Household Fixtures for Life Skills Instruction – Jacobs calculated the degree to which each school fulfills HDOE Ed Spec for fully self-contained classrooms (FSC) by measuring what proportion of required FSC rooms are equipped with household fixtures to support life skills instruction. Rooms that possess some but not all of laundry, shower, restrooms, and kitchen were given a partial score.

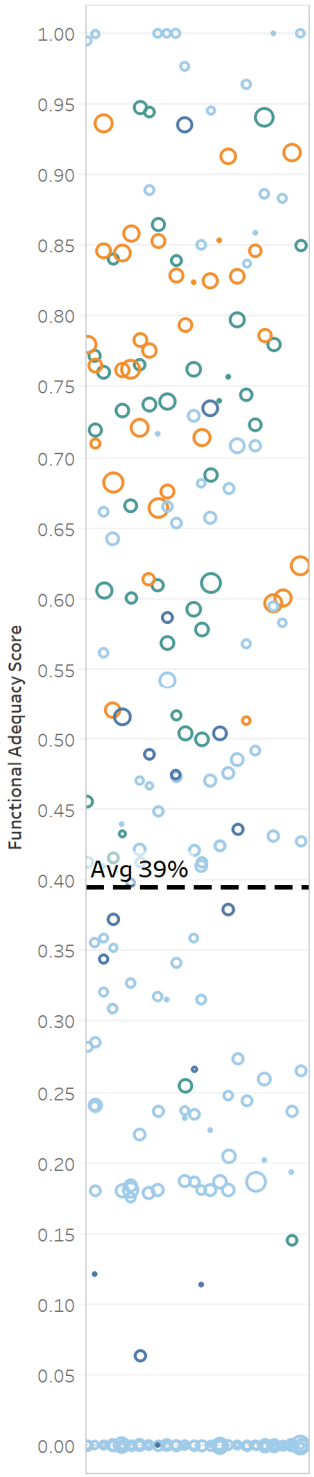
CATEGORY 2: SPECIALIZED CLASSROOMS



Another basic aspect of functional adequacy of a school facility is the existence of sufficient specialized classroom spaces to equip instructors to provide access to diverse curriculum offerings. Measured adequacy for specialized classrooms is broken into scores for the following room type subcategories from the HIDOE Ed Specs for middle schools and high schools where applicable. Conforming to the HIDOE Ed Specs for elementary schools, the category is limited to supplemental classrooms at the lower grades. Additionally, because middle school and high school supplemental classrooms are visually indistinguishable from general classrooms, these are measured under the following general classrooms.

- **Science Classrooms/Laboratories** (high school and middle schools only) – Score is based on two weighted measures: Count and square feet area of existing science classrooms expressed as percentages of the count and square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment. Note: the scores do not include each classroom's fixtures and equipment as specified by the HIDOE Ed Specs, presenting an opportunity for future study and enhancement to these assessment findings.
- **Art Classrooms** (high school and middle schools only) – Score is based on two weighted measures: count and square feet area of existing art classrooms expressed as percentages of the count and square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment.
- **Music Classrooms** (high school and middle schools only) – Score is based on two weighted measures: count and square feet area of existing music, choir, band, and orchestra rooms expressed as percentages of the count and square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment.
- **Dance and Theater Classrooms** (high school and middle schools only) – Score is based on two weighted measures: count and square feet area of existing dance and drama rooms expressed as percentages of the count and square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment.
- **Family/Consumer Science Classrooms** (high school and middle schools only) – Score is based on two weighted measures: count and square feet area of existing family and consumer science rooms expressed as percentages of the count and square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment.
- **Industrial Arts Shops/Classrooms** (high school and middle schools only) – Score is based on two weighted measures: count and square feet area of existing industrial arts rooms expressed as percentages of the count and square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment. Scores are calculated in aggregate for manufacturing shops, building and construction shops, design and engineering classrooms, electronics and computer systems labs, transportation systems, and vocational technology.
- **Supplemental Classrooms** (elementary schools only) – Score is based on two weighted measures: count and square feet area of existing dedicated educational enrichment spaces such science rooms, music rooms, art rooms expressed as percentages of the count and square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment.

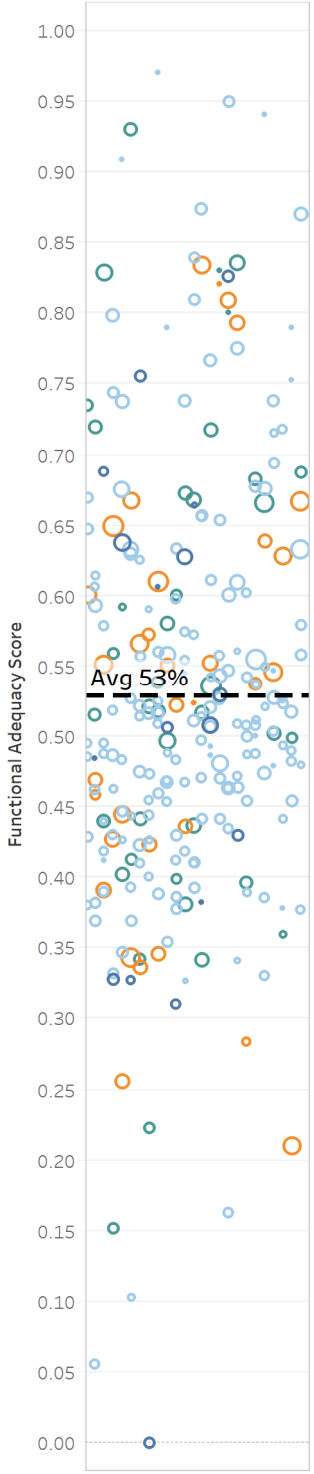
CATEGORY 3: AGE OF CLASSROOM BUILDINGS



With notable exceptions such as historically significant schools, older school buildings tend to exhibit functional inadequacies versus their newer counterparts due to smaller classroom sizes, outdated program adjacencies, difficulty in maintenance and infrastructure upgrades, and overall building and system life cycle expiration. Using a broad building life cycle methodology based on basic building types and expected useful life, this category captures the relative age profiles of buildings housing each school's classrooms.

Table 12: Category 3 Adequacy Scores - Lowest 25 and Highest 5 Schools

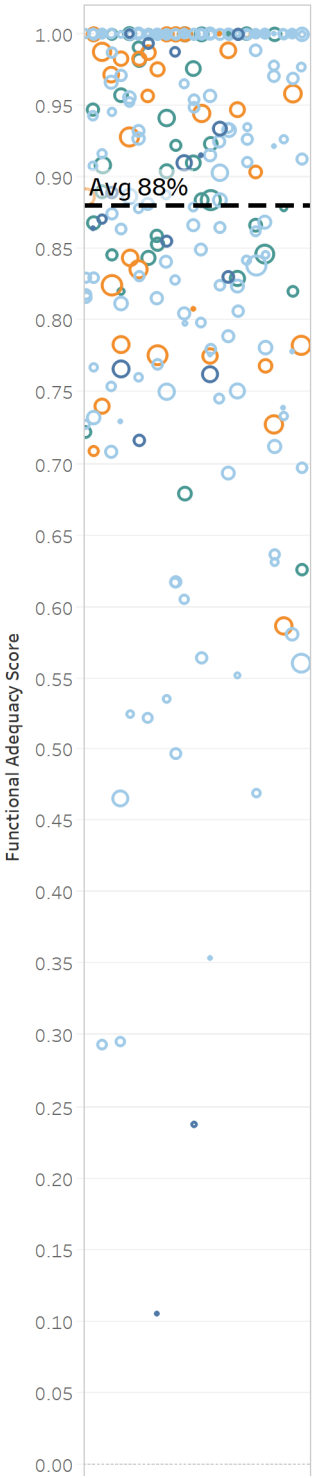
CATEGORY 4: PORTABLES



Like most public school systems, HIDOE has used numerous portable classroom buildings to augment the permanent building portfolio and address enrollment fluctuations over the years. Portables imply numerous inadequacies such as less durable construction materials, inefficient utility and maintenance costs, poor acoustics, exposure to rain, and poor thermal comfort. Moreover, potables are generally regarded by administrators and teachers alike to undermine modern instructional trends such as cross-curricular team-teaching, project-based learning, and blended learning, which are better suited in spaces in closer proximity to other building spaces. Many public school systems establish a policy limiting the use of portables to house only a moderate proportion of students. This functional adequacy category is expressed as the percent of student capacity housed in permanent buildings, with 100 percent representing no portables used for instructional purposes.

Table 13: Category 4 Adequacy Scores - Lowest 25 and Highest 5 Schools

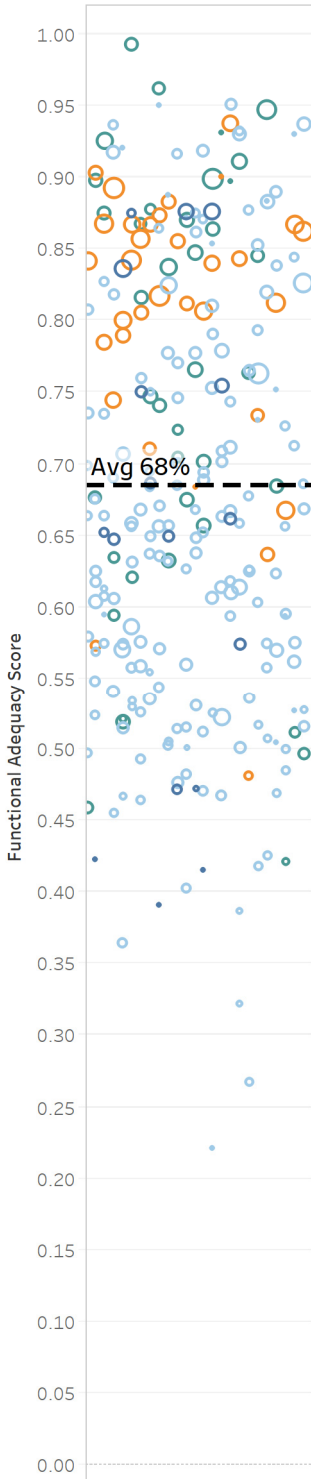
CATEGORY 5: ADMINISTRATIVE CENTER



As outlined in the HDOE Ed Specs, a school's administrative center is critical to its daily operations as it is the gateway for parents and community, and it supports effective leadership by providing an efficient, collaborative workplace. Like many public schools, Hawaii schools have been expanded over the years with numerous classroom building additions and portables. With more students came the need for additional administrative staff to serve them, and the original admin offices quickly became under-sized. Scarce capital funding was invested in student spaces first, while the growing administration was forced to use any available space on campus, including far flung closets, underutilized classrooms, and even portables.

Administrative functional adequacy is comprised of the following measures:

- **Administration SF vs Standard** – total square feet area of existing spaces used for administration expressed as percentage of the square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment.
- **Co-location of Administration** – total square feet area of administrative spaces collocated within the administrative center building expressed as a percentage of **all** administrative spaces on campus.
- **Admin in Permanent Buildings** – total square feet area of administrative spaces located in permanent structures (as opposed to portables) expressed as a percentage of **all** administrative spaces on campus.
- **Admin Center Age** – percent of remaining expected life, based on the age and life cycle model of the basic building type of the admin center building.

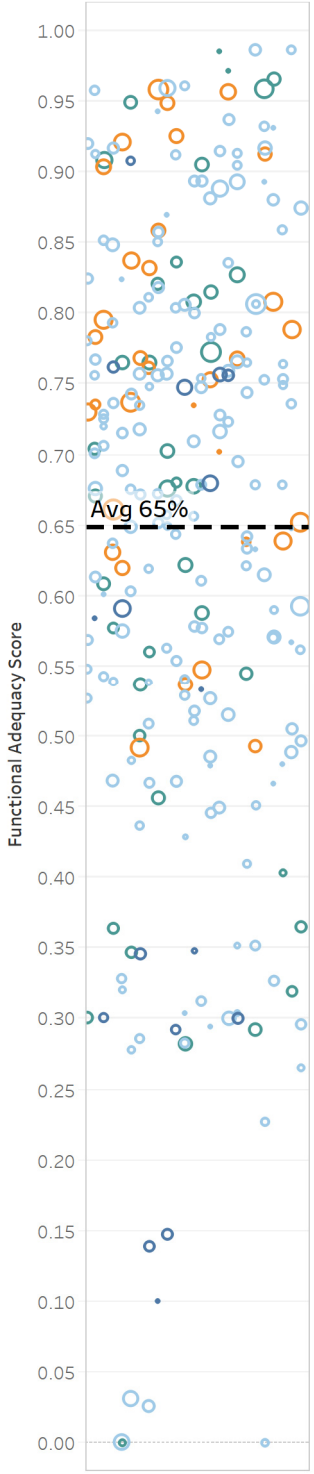
CATEGORY 6: LIBRARY AND COMPUTER CENTER



The Academic Support category refers to the library media center and computer resource center as outlined in the HDOE Ed Specs. Academic support functional adequacy is comprised of the following measures:

- **Library SF vs Standard** – total square feet area of existing library spaces expressed as a percentage of the square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment.
- **Library Age** – percent of remaining expected life, based on the age and life cycle model of the basic building type of the library building.
- **Library in Permanent Buildings** – total square feet area of library spaces located in permanent structures (as opposed to portables) expressed as a percentage of **all** library spaces on campus.
- **Computer Resource Count and SF vs Standard** – count and square feet area of existing computer resource centers expressed as percentages of the count and square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment. Because of the similarities of space and equipment between the computer resource center and business education classroom, both were assessed and measured together under this category.

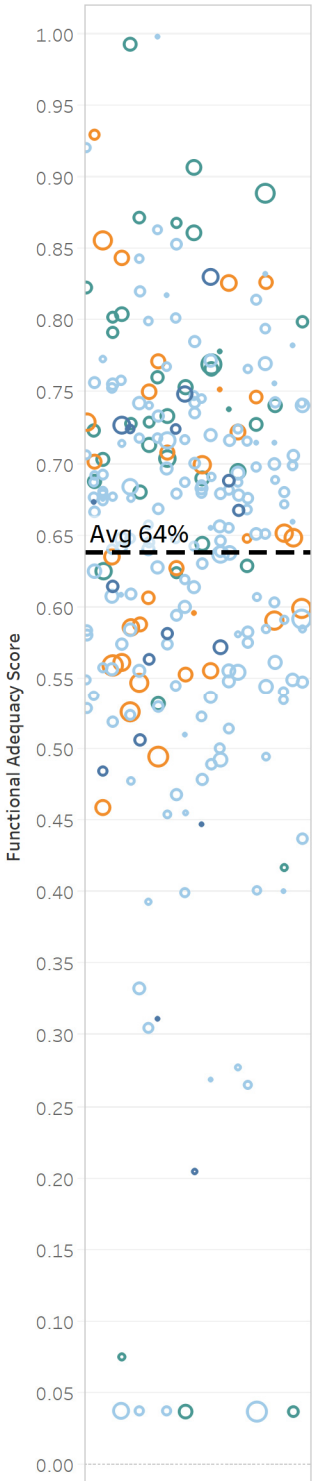
CATEGORY 7: FOOD SERVICE



Healthy and timely nutrition is paramount to a student's well-being and ability to learn at school. As a result, the school's cafeteria and kitchen facilities must be adequately sized to accommodate all students in minimal lunch periods. Moreover, the cafetorium serves a dual purpose for school performances and community assemblies.

- **Cafetorium SF vs Standard** – total square feet area of existing cafeteria expressed as a percentage of the square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment.
- **Cafetorium Dining Room Utilization** – score is based on the number of implied lunch periods using the SF area of dining space and a 15 SF per student per lunch period metric, with three periods or less representing the ideal.
- **Existence of Stage** – 100 percent score for collocated performance stage, and 50 percent score if a stage exists in another part of the campus.
- **Cafetorium Age** – percent of remaining expected life, based on the age and life cycle model of the basic building type of the cafeteria building.
- **Cafeteria in Permanent Buildings** – total square feet area of cafeteria spaces located in permanent structures (as opposed to portables) expressed as a percentage of **all** cafeteria spaces on campus.
- **Kitchen SF vs Standard** – total square feet area of existing kitchen expressed as a percentage of the square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment, with differentiated requirements for conventional, preparation, and serving kitchens.
- **Kitchen Age** – percent of remaining expected life, based on the age and life cycle model of the basic building type of the kitchen building.
- **Kitchen in Permanent Buildings** – total square feet area of kitchen spaces located in permanent structures (as opposed to portables) expressed as a percentage of **all** cafeteria spaces on campus.

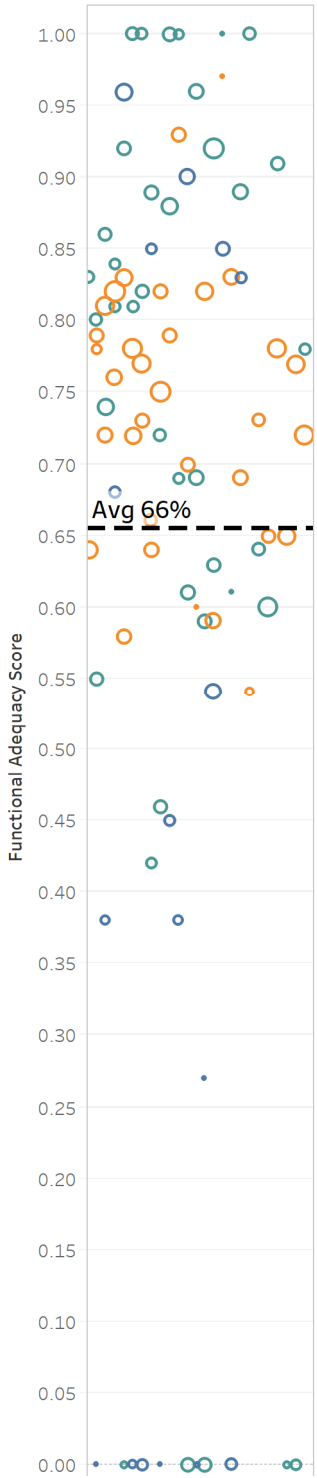
CATEGORY 8: PHYSICAL EDUCATION / ATHLETICS



Functional adequacy of physical education and athletic spaces are comprised of the following measures:

- **Gym SF vs Standard** – total square feet area of existing gymnasium floor expressed as a percentage of the square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment.
- **Gym Age** – percent of remaining expected life, based on the age and life cycle model of the basic building type of the gymnasium building.
- **Gym Locker/Shower SF vs Standard** – total square feet area of existing locker/shower facilities in the gymnasium for JV and varsity use as a percentage of the square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment.
- **PE Locker SF vs Standard** – total square feet area of existing PE locker/shower facilities expressed as a percentage of the square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment. Note, if locker facilities are shared for both PE and athletics, the space is measured under PE lockers to highlight that a dedicated athletic locker space is not present.
- **PE Locker Gender Equity** – score is based on the equity of PE locker SF area assigned to girl and boy students, with the wider the disparity, the lower the score.
- **Athletic Locker SF vs Standard** – total square feet area of dedicated athletic locker/shower facilities expressed as a percentage of the square feet area required by HIDOE Ed Specs based on HIDOE's 5-year 2021-22 projected enrollment. Note the HDOE Ed Spec prescribes boy and girl athletic locker/shower facilities distinct from the JV/varsity lockers in the gymnasium.
- **Athletic Locker Gender Equity** – score is based on the equity of athletic locker SF area assigned to girl and boy students, with the wider the disparity, the lower the score.

Capacity & Utilization

Capacity and Utilization Analysis

One of the goals of school capital planning is to strategically provide right-sized facilities where and when needed. This directs the school system's limited resources to achieve maximized student benefit. In order to accomplish this objective, it is critical to have a clear understanding of school **capacity** and **utilization**.

School administrators, planners, and architects employ a variety of methodologies to measure school capacity. Unfortunately, there are numerous inconsistently applied terms used to describe school capacity. To avoid miscommunication between stakeholders and foster informed decision making, it is important to define and communicate methodologies and terms regarding capacity.

This study uses a **functional capacity** approach to define the capacity of a school as the *number of students a facility can effectively serve given its educational programs*. It does not describe the physical maximum number of students that could be packed into a school at a given time, which school principals do not view as realistic given the variation of student cohort sizes, class schedules, and course demand.

This study uses *functional capacity* and *capacity utilization* interchangeably with the shortened terms *capacity* and *utilization.*

METHODOLOGY

The study determined functional capacity and projected capacity utilization of each HIDOE school by performing a thorough inventory of all classrooms and educational spaces and their current use, applying capacity formulas as outlined below.

Classroom Capacity Model

A detailed inventory of all instructional spaces was compiled by each room's use, and capacity formulas consistent with the HIDOE Ed Specs design enrollment calculations were applied to each. At the elementary school level, home rooms where students receive their standard daily instruction are assigned capacity, while pull-out spaces dedicated to special instruction such as gyms, computer labs, music, and art rooms are not assigned capacity. All secondary instruction spaces except unique pull-out resource rooms were figured into capacity calculations due to rotating schedules. Special education rooms were used in capacity calculations but at a reduced student per room rate.

Classroom Size Adjustments

Prorated area adjustments were made for classrooms less than 85 percent of HIDOE Ed Spec square feet area standards. The intent is to adjust capacity of abnormally small classrooms downward without adjusting for rooms with normal variation in room size. This study does not prorate the capacity of large classrooms upward, as it is not assumed that these rooms will be filled at max capacity every period of the school day.

Utilization Factors

Utilization factors of 95 percent for elementary, 85 percent for middle, and 75 percent for high school were applied to the sum total of area-adjusted classroom capacities to allow for grade cohort size variances, teacher conference periods, and the higher level of program diversity and variance of student demand for courses at the secondary grade levels.

Permanent and Temporary Capacity

Functional capacity is measured and differentiated by the type of building in which each classroom resides, to determine each school's capacity including and excluding portable classroom buildings. This distinction helps inform capital planning that minimizes reliance on undesirable portable classrooms.

Recapturable Capacity

While the capacity of each room is based on its current field-verified use, the assessment deliberately flagged classrooms used for non-instructional purposes as 'recapturable'. This separate measurement of potential capacity helps inform long range facility planning efforts that considers all options, including the provision of suitable alternative facilities for non-instructional operations.

Capacity Utilization

Utilization is a calculation of the student enrollment divided into the capacity, expressed as a percentage. Because of the utilization factors applied to capacity for each grade level, the current and projected capacity utilization percentages are normalized where 100 percent utilization represents a school operating reasonably at capacity. Optimal capacity utilization falls between 85 percent and 100 percent, and utilization below 70 percent and over 110 percent represents severe under and over utilization requiring action. The terms *current utilization* and *projected utilization* refer to the enrollment number factored in as the numerator of the utilization ratio. Most planners prefer to use the most accurate enrollment projections available up to 5-years, which represents the timeframe most school districts require to acquire funding and execute large scale capital projects. For this study, Jacobs used HIDOE's 5-year enrollment projections for 2021-22.

Capacity and Utilization Calculation Example

Table 18 illustrates an example of the capacity and utilization calculation.

Table 18: Capacity and utilization calculation example

CAPACITY AND UTILIZATION FINDINGS

As summarized in Table 19, HIDOE's 2021-22 projected enrollment totals 174,978 students statewide, and the school facilities are measured to provide 181,424 aggregate capacity. This represents a blended average utilization of 96 percent, which would be very healthy for an individual school. Even when broken down by grade level, each overall utilization measure falls in an optimal range.

However, consistent with most large scale school systems, HIDOE has experienced natural demographic shifts and localized suburban growth in the face of a unique, diverse geography, resulting in widespread variation in capacity utilization across the state.

Table 19: HIDOE Capacity Utilization by Grade Level

Ref	(A) School	(B) Current Enrollment	(C) Projected Enrollment	(D) Permanent Capacity	(E) Temporary Capacity	(F = D + E) Capacity Permanent + Temporary	(G = F - C) Capacity Surplus / (Shortage)	(H) Recapturable Capacity	(I = C / F) Utilization, Projected	(J = E / F) % of Capacity in Portables

By drilling down to the District level by grade configuration, further differentiation in capacity utilization is found, as depicted in Table 20. The indicators at the right outline the capacity utilization and extent of portables deployed for all elementary, middle, high, and combination schools within each District boundary. Note the high utilization measures for the high schools in Leeward, Central,

and Maui Districts, which due to Hawaii's geography cannot be operationally offset by surplus capacity at other districts. Meanwhile, certain localized areas of underutilization stand out, particularly at the middle school level.

Put simply, **Hawaii has enough school capacity, just not in the right places.**

By analyzing capacity utilization at the individual school level, further variation and outliers are revealed. Table 21 is filtered for the elementary schools in the Maui High School feeder complex. In isolation, Kahului and Lihikai are over-utilized at 123 and 112 percent, together representing a shortage of 296 capacity. Meanwhile there is more than sufficient surplus capacity in its neighboring Maui complex counterparts, making boundary policy adjustments or educational program changes that would avoid large capital investment a potential solution.

Figure 7 illustrates the broad range of individual schools' capacity utilization within each HIDOE District, ranging from as low as Waiahole Elementary at 36 percent to as high as Campbell High's 154 percent utilization. As the green band depicts, a significant proportion of schools operate outside of the ideal range of 80-110 percent utilization. This scenario implies educational and operational detriments of over-crowding, 'travelling' teachers, over-reliance on portable classrooms, and multi-track academic calendars at over-utilized schools, and diluted budgets for instruction and educational program offerings due to under-utilized facilities.

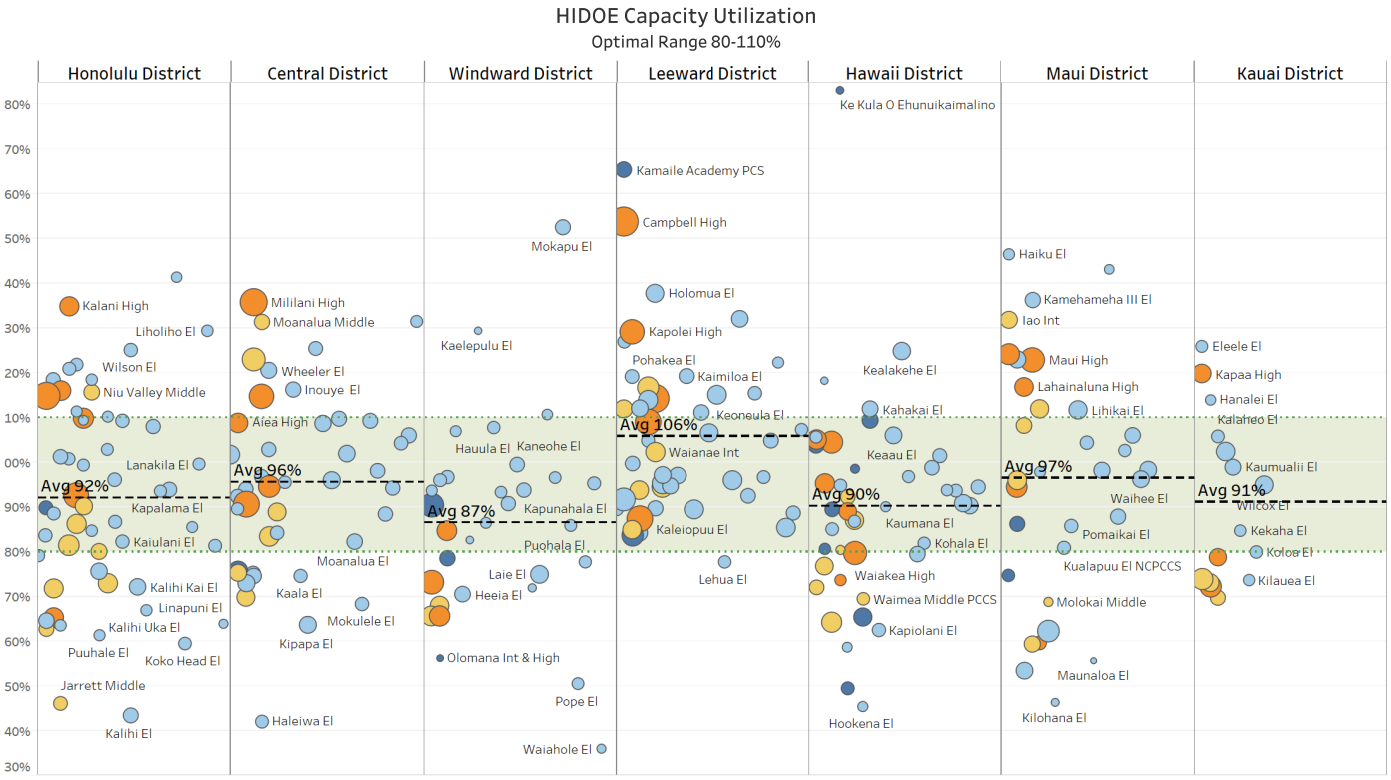

Figure 7: HIDOE Capacity Utilization by District

Capacity Outliers: Over or Under-Utilization

Table 22 outlines the outliers on the farthest extremes of capacity over- and under-utilization, sorted in descending order by utilization, filtered for the 20 highest and 20 lowest. A complete detailed listing of all 260 HIDOE schools appears in Appendix C, sorted by District, Complex, and grade level.

Portables and Temporary Capacity Analysis

Like all public school systems, HIDOE has relied upon the use of portable classroom buildings to address short term enrollment fluctuations. Because portables are generally regarded as inferior to permanent structures both in terms of educational efficacy as well as life cycle operational costs, many districts employ policy or practices to limit the use of portables to a moderate percentage of a school's capacity. In each of the tables within this section the far right Column J has visual indicators signaling cases of high-reliance on portables.

The 20 schools with the highest proportion of capacity in portables are listed in Table 23, with several campuses over 50 percent. Moreover, several schools have a large proportion of portable capacity *and* have under-utilized capacity, meaning that the portables are effectively surplus and could be deployed at other schools that require incremental capacity.
