

STATE OF HAWAII
DEPARTMENT OF EDUCATION

P.O. BOX 2360
HONOLULU, HAWAII 96804

OFFICE OF THE SUPERINTENDENT

December 29, 2021

The Honorable Ronald D. Kouchi, President
and Members of the Senate
State Capitol, Room 409
Honolulu, Hawaii 96813

The Honorable Scott K. Saiki, Speaker
and Members of the House of Representatives
State Capitol, Room 431
Honolulu, Hawaii 96813

Dear President Kouchi, Speaker Saiki, and Members of the Legislature:

For your information and consideration, I am transmitting a copy of the annual report, Sustainable Schools Initiative, pursuant to Section 302A-1510, Hawaii Revised Statutes (HRS). In accordance with Section 93-16, HRS, I am also informing you that the report may be viewed electronically at: <http://www.hawaiipublicschools.org/VisionForSuccess/SchoolDataAndReports/StateReports/Pages/Legislative-reports.aspx>.

Sincerely,

Keith T. Hayashi
Interim Superintendent

Annual Report on Sustainable Schools Initiative

December 2021

Section 302A-1510, Hawaii Revised Statutes (HRS), requires the Hawaii State Department of Education (Department) to annually report on the following: 1) the overall progress toward the net-zero energy goal, 2) its plans and recommendations to advance the net-zero goal, and 3) any challenges or barriers encountered or anticipated by the Department in meeting the net-zero energy goal.

**Annual Report on the Hawaii State Department of Education’s (Department)
Sustainable Schools Initiative 2021**

**1. OVERALL PROGRESS TOWARD THE NET-ZERO ENERGY GOAL SET FORTH
IN SECTION 302A-1510(a), HRS:**

Hawaii School Facilities Energy Report Comparison of Fiscal Year (FY) 2020 and FY 2021				
	<u>FY 2020</u>		<u>FY 2021</u>	
School Facilities Energy	kWh	\$	kWh	\$
Utility Energy ⁽¹⁾	103,446,645	\$ 34,100,088	95,080,156	\$ 29,131,848
Renewable Energy	23,669,203	\$ 5,449,049	23,368,880	\$ 5,529,904
Total Energy	127,115,848	\$ 39,549,137	118,449,036	\$ 34,661,752
<i>1.</i> Utility Energy includes Hawaiian Electric Company (HECO), Hawaii Electric Light Company (HELCO), Kauai Island Utility Cooperative (KIUC), and Maui Electric Company (MECO).				

The year-over-year (YOY) percentage changes and the percent of total energy are provided in the table below:

	Year-Over-Year Change (%)		Percent of Total Energy (kWh)	
School Facilities Energy	kWh	\$	FY 2020	FY 2021
Utility Energy ⁽¹⁾	-8%	-15%	81%	80%
Renewable Energy	-1%	1%	19%	20%

For the full FY 2021, total electricity consumption across all public campuses statewide decreased 7% from FY 2020. The total cost of electricity decreased by 12%.

YOY, utility electricity consumption decreased 8%. The YOY cost of utility electricity decreased 15% due to lower utility rates. Utility energy comprises 80% of the Department’s electricity consumption. The average cost of utility electricity for FY 2021 was \$0.3064 per kWh compared to \$0.3296 in FY 2020, a decrease of 7.1%.

YOY, renewable electricity consumption across all public campuses statewide was down 1% from FY 2020. However, due to contractual increases in the rates paid to Power Purchase Agreement providers for many campuses, the annual cost of renewable electricity increased by 1%.

School Electricity Consumption

Million kWh

Figure 1 - Total Electricity Consumption by FQ

The major factor affecting consumption during FY 2021 was the closure of campuses due to the COVID-19 pandemic. Although school facilities did require a certain level of power utilization during the closures, this was greatly reduced. On a YOY basis, the consumption in the fourth quarter (Q4) of FY 2021 rebounded sharply from the extremely low consumption in Q4 of FY 2020, but was still lower than consumption in Q4 of FY 2019.

Similarly, the rebound in school facility consumption has continued in the first quarter (Q1) of FY 2022 compared to Q1 of FY 2021, but is still lower than consumption in Q1 of FY 2020.

In FY 2021, the percent consumption of renewable energy increased to 19.7% from 18.7% in FY 2020. This was due primarily to a 15% reduction in the consumption of utility-supplied energy. Also, the reduction in utility-supplied energy was significantly greater than the 1% reduction in renewable energy consumption, which probably occurred from natural variation in solar insolation due to weather and cloud cover.

Solar Fraction

Figure 2 – Solar Fraction of Electricity Consumption for FY 2016-2021

Note : FY 2020 Q4 spike is due to a combination of low utility consumption and normal solar production

Solar Production

Million kWh

Figure 3 – Solar Energy Production for FY 2016-2021

2. PLANS AND RECOMMENDATION TO ADVANCE THE NET-ZERO ENERGY GOAL SET FORTH IN SECTION 302A-1510(a), HRS:

It is not economically feasible to substantially add to the production of alternative energy at school campuses under current market conditions. Although the cost of solar panels continues to decrease, the cost to upgrade roofs or install parking canopies is cost-prohibitive.

Meanwhile, United States-based thin-film manufacturer, Sunflare, has been promoting its CIGS (copper, indium, gallium, and selenium) solar panels for weight-constrained rooftops. However, it remains to be proven that this technology is a sustainable alternative.

The major constraint to further advances in achieving net-zero school campuses in Hawaii is the lack of a safe, sustainable, and cost-effective energy storage system. The most likely candidate is the iron flow battery, but the technology needs several more years of development.

Although the Department continues to explore ways to make schools more sustainable, the Department recommends that the Sustainable Schools Initiative be transformed to focus, in the intermediate-term, on lower-cost energy conservation measures rather than net-zero consumption.

3. CHALLENGES OR BARRIERS ENCOUNTERED OR ANTICIPATED IN MEETING THE NET-ZERO ENERGY GOAL SET FORTH IN SECTION 302A-1510(a), HRS:

In FY 2021, the average cost of utility electricity was \$0.31 per kWh. However, as a planning tool, utilizing the average cost is misleading. Only a portion of the average cost is avoidable as long as the school campus remains connected to the grid. Thus, reducing utility energy consumption by 1 (one) kWh will reduce utility electricity cost by less than \$0.31. The fixed component of the utility energy bill reduces any economic savings that are achieved by replacing carbon-based fuels with lower-cost alternative energy.

It is anticipated that the problem will worsen in future years as the underlying infrastructure of the electric companies shifts to include more renewable energy sources. Renewable energy sources, by their nature, have large fixed costs and small marginal costs. As HECO shifts its generating infrastructure to more renewable sources, its rate structure will shift toward a larger fixed component and a smaller incremental component.

The mandate that public school facilities achieve net-zero energy consumption 10 years ahead of the public utilities, in effect, sets up the Department as a de facto competitor to the public utilities in producing renewable energy economically across the State of Hawaii. Since there is no economic benefit to the State for such competition, the Department recommends that Section 302A-1510(a), HRS be revised to complement the mandate placed on the public utilities. Recommended language is provided below:

§302A-1510 Sustainable Schools Initiative

- (a) ~~The department shall establish a goal of becoming net zero with respect to energy use, producing as much renewable energy as the department consumes across all public school facilities, by January 1, 2035.~~
- (a) The department shall establish goals of renewable energy use that is complimentary and supportive of §269-92, which requires 100% renewable energy electricity consumption by 2045.
- (b) The department shall use the amount and value of energy consumed by the department across all public school facilities during the 2015-2016 fiscal year as the benchmark for measuring the department's progress toward the energy usage goals set forth in subsection (a).
- (c) The department shall submit an annual report that shall include information on:
- (1) The overall progress toward the ~~[net zero energy goal]~~ energy goals set forth in subsection (a);
 - (2) Its plans and recommendations to advance the ~~[net zero energy goal]~~ energy goals set forth in subsection (a);
 - (3) Any challenges or barriers encountered or anticipated by the department in meeting the ~~[net zero energy goal]~~ energy goals set forth in subsection (a).

Figure 4 – Proposed Section 302A-1510, HRS; new language underlined

§269-92 Renewable Portfolio Standards

- (a) Each electric utility company that sells electricity for consumption in the State shall establish a renewable portfolio standard of:
- (1) Ten percent of its net electricity sales by December 31, 2010;
 - (2) Fifteen percent of its net electricity sales by December 31, 2015;
 - (3) Thirty percent of its net electricity sales by December 31, 2020;
 - (4) Forty percent of its net electricity sales by December 31, 2030;
 - (5) Seventy percent of its net electricity sales by December 31, 2040; and
 - (6) One hundred percent of its net electricity sales by December 31, 2045.

Figure 5 – Section 269-92 Renewable Portfolio Standards, HRS

If the future cost per kWh of onsite renewable energy and energy storage technologies were to decrease sufficiently, the financial cost of these technologies may make net-zero consumption a more fiscally achievable goal.

The results of the FY 2021 complementary Sustainable Schools energy policy are illustrated below:

- DOE self-generated solar energy share = 19.7%
- HECO-provided renewable energy share = $34.5\% \times (100.0\% - 19.7\%) = 27.7\%$
- Combined renewable energy share = $19.7\% + 27.7\% = 47.4\%$

Note that, in FY 2021 compared to FY 2016, conservation, considered as a renewable energy source, provided (at a much lower cost than solar):

- Conservation energy share = $(147.6 - 118.5) / 147.6 = 29.1 / 147.6 = 19.7\%$

Act 176, SLH 2016 Sustainable Schools

FY	HIDOE Consumption	Change	% Renewable Self Generation	% Renewable of HECO Provided Energy
FY 2021	118.5M kWh	-7.1% or 9.1M kWh reduction*	19.7% solar power	DOE Share of HECO @ 27.7%
FY 2020	127.6M kWh	-5.2% or 7.1M kWh reduction	18.7% solar power	
FY 2019	134.7M kWh	-4.4% or 6.1M kWh reduction	17.4% solar power	
FY 2018	140.8M kWh	-2.3% or 3.3M kWh reduction	16.1% solar power	
FY 2017	144.1M kWh	-2.4% or 3.5M kWh reduction	9.3% solar power	
FY 2016	147.6M kWh	Statutory Benchmark	5.0% solar power	

* COVID shutdown

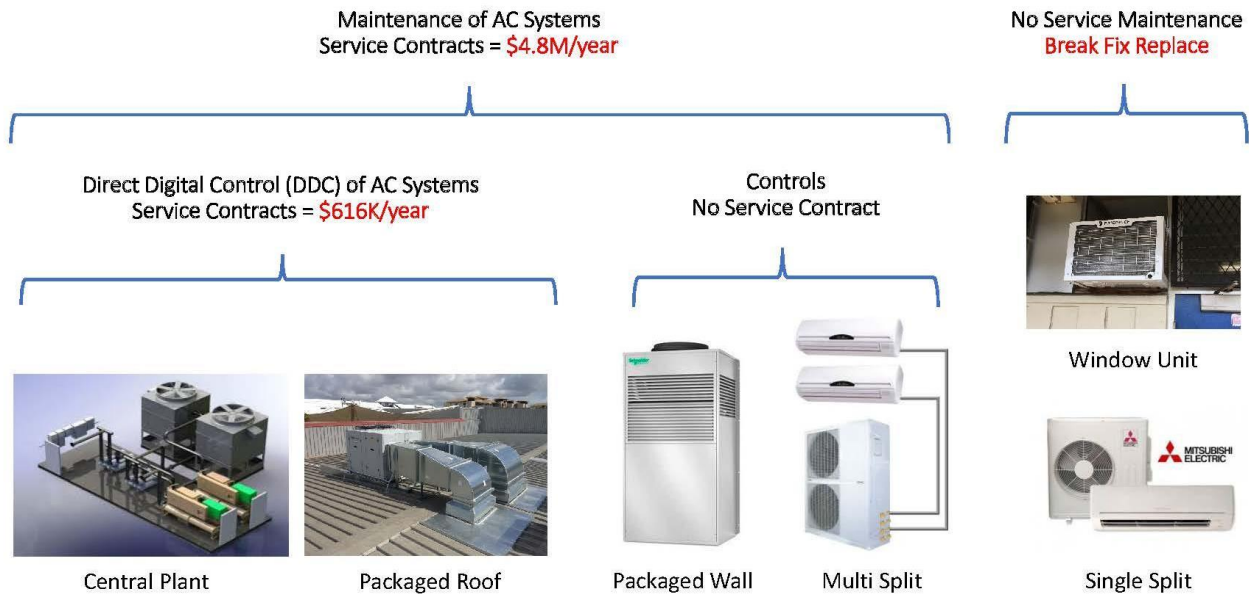

4. IMPLEMENTATION OF MEASURES TO COOL PUBLIC SCHOOL CLASSROOMS SET FORTH IN SECTION 302A-1510(e), HRS:

The cooling of Hawaii schools is a significant undertaking due to the number of classrooms involved (~10,300 classrooms) and the age of the existing cooling equipment. Moreover, much of the existing facility wiring was not designed to supply the required additional electrical load for new air conditioning. Required wiring upgrades may be prohibitively costly even before the new cooling equipment is installed.

Types of Air Conditioning Systems

The Department has service contracts on its multi-unit air conditioning systems that total \$4.8 million a year. For single-unit systems, there is no service contract as it is more cost-effective to replace the single unit at the end of its life.

Types of AC Systems

Deferred Maintenance

The Department has ~\$695 million in installed air conditioning. However, it is expected to cost ~\$188.5 million to replace all of the air conditioning systems that are over 20 years old. The Department has already spent \$42 million from the Green Energy Money Saver loan to help address some of its air conditioning needs. However, much more funding would need to be appropriated to fully address the backlog.

AC Deferred Maintenance

Island	Schools	Installed AC	Replacements GEMS Loan	AC > 20 years old Replacement Costs
Oahu 01 Honolulu 02 Central 03 Leeward 04 Windward	172	\$500,000,000	\$42,000,000	\$95,000,000
05 Hawaii	43	\$100,000,000		\$35,000,000
06 Maui	32	\$70,000,000		\$55,000,000
07 Kauai	16	\$25,000,000		\$3,500,000
<u>Total</u>	<u>263</u>	<u>\$695,000,000</u>	<u>\$42,000,000</u>	<u>\$188,500,000</u>

The following are pictures of some aging, but currently functioning air conditioning systems in use at our public schools.

Air Conditioning Design Standards

The Department has found that decentralized air conditioning systems are much more economical over the service life of the system than complex centralized air conditioning systems.

AC Design Standards Complex Unsustainable Systems

Replacement Imminent	Operational
1) Mililani Middle 1998	7) Ewa Makai Middle (incl. cafeteria) 2011
2) Mililani Mauka Elementary 1993	8) Kapolei Middle 1999
3) Maili Elementary (incl. cafeteria) 1966	9) Kapolei High 2000
4) Keahu High 1999	10) Roosevelt HS Auditorium
5) Holomua Elementary 1995	11) Keahu Elementary 1999
6) Mililani Ike Elementary 2004	12) Keoneula Elementary 2007
	13) Konawaena Elementary 2000
	14) Nanaikapono Elementary 2004
	15) Waikole Elementary 1998

Central Plant Systems

- Complex to operate and maintain
- System breaks entire school shuts down
- ≈ \$10M - \$20M to replace central plants

AC Design Standards Complex Unsustainable Systems

AC Design Standards

Sustainable Systems

Packaged Roof

Packaged Wall

Multi Split

Single Split

Window or Wall

Air Conditioning Addition Options - School Directed Air Conditioning (SDAC)

AC Addition Options

\$8M = 1000 Classrooms with Window Air Conditioners

\$60M = 1000 Classrooms with Split Air Conditioners

\$120M = 1000 Classrooms with Package Air Conditioners

Classrooms	Window AC	Split AC	Package AC
<ul style="list-style-type: none"> With AC 6000 classrooms \$670M inventory \$42,495,928 electricity bill all schools 	Cool with Window AC Least expensive Less efficient New dual inverter technology Noisy	Cool with Split AC Expensive More efficient Requires conduits Quiet	Cool with Package AC Very expensive Most efficient Requires ducts Quiet
Estimate Without AC = 5000 Cost Additional Electricity Cost	Estimate \$8K per classroom \$40,000,000 \$8,800,000	Estimate \$60K per classroom \$300,000,000 \$6,984,760	Estimate \$120K per classroom \$600,000,000 \$6,146,000

To air condition the remaining ~5,000 classrooms without air conditioning, the most cost-effective option would use window air conditioning. Meanwhile, the most expensive option would be to equip the remaining classrooms with package air conditioning at a cost of ~\$606 million.

Under the SDAC program, 3,341 window air conditioning units have been installed with an additional 778 units in progress.

As a component of the SDAC program, schools that are interested in adding window air conditioners need to request that a building electrical assessment be conducted to determine if there is sufficient electrical capacity to handle the additional load of the air conditioning. Thus far, 682 electrical assessments have been performed with an additional 257 pending.

The Department is facing some difficulties in acquiring up-to-date data on the existing equipment installed in classrooms. There are over 10,300 classrooms in Hawaii's 256 public schools. An

average of 40 classrooms per school would take over 10 person-hours to conduct just a 15-minute inspection of each room. To conduct such inspections regularly would require additional personnel.

The table below provides a list of the scope of facilities at each Department school:
